

GOAU

U.S. Global GO GOLD and Precious Metal Miners ETF

We believe GOAU is different because the index focuses not just on mining stocks with large market caps, as many funds do. Instead, it seeks high-quality, well-managed producers that have a proven track record of sustainable profitability even when precious metal prices are down.

FUND DETAILS

Ticker: GOAU	Inception Date: 6/27/17
CUSIP: 26922A719	Number of Holdings: 29
Intraday NAV: GOAU.IV	Stock Exchange: NYSE Arca
Expense Ratio: 0.60%	

FUND DESCRIPTION

The U.S. Global GO GOLD and Precious Metal Miners ETF (NYSE Arca: GOAU) provides investors access to companies engaged in the production of precious metals either through active (mining or production) or passive (owning royalties or production streams) means.

INDEX DETAILS

Index Ticker: GOAUX	Average Market Cap: \$2.27
Index Inception Date: 6/15/17	Weighted Average Market Cap: \$3.69
Rebalance Schedule: Quarterly	
Weighting: Market Cap and Fundamental Factor Based	

INDEX DESCRIPTION

The U.S. Global GO GOLD and Precious Metal Miners Index uses a robust, dynamic, rules-based smart-factor model to select precious minerals companies that earn over 50% of their aggregate revenue from precious minerals through active (mining or production) or passive (royalties or streams) means. The index uses fundamental screens to identify companies with favorable valuation, profitability, quality and operating efficiency. The index consists of 28 common stocks or related ADRs.

FUND INDUSTRY BREAKDOWN

FUND COUNTRY BREAKDOWN *(by Country of Domicile)*

Canada	58.02%
Australia	12.16%
United States	11.84%
South Africa	10.88%
Peru	3.02%
Tanzania	2.10%
Russia	1.98%

THE ROYALTY MODEL

Royalty companies can help investors manage many common risks associated with traditional producers. Because they're not directly responsible for building and maintaining mines and other costly infrastructure, huge operating expenses can be avoided.

Cumulative return is the aggregate amount that an investment has gained or lost over time. Annualized Return is the average return gained or lost by an investment each year over a given time period. Performance is annualized for periods greater than 1 year.

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. For performance data current to the most recent month-end please visit www.usglobletfs.com.

Please consider carefully a fund's investment objectives, risks, charges and expenses. For this and other important information, obtain a statutory and summary prospectus by visiting www.usglobletfs.com. Read it carefully before investing.

Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or premium to NAV and are not individually redeemed from the fund. Brokerage commissions will reduce returns. Because the fund concentrates its investments in specific industries, the fund may be subject to greater risks and fluctuations than a portfolio representing a broader range of industries. The fund is non-diversified, meaning it may concentrate more of its assets in a smaller number of issuers than a diversified fund. The fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks are greater for investments in emerging markets. The fund may invest in the securities of smaller-capitalization companies, which may be more volatile than funds that invest in larger, more established companies. The performance of the fund may diverge from that of the index. Because the fund may employ a representative sampling strategy and may also invest in securities that are not included in the index, the fund may experience tracking error to a greater extent than a fund that seeks to replicate an index. The fund is not actively managed and may be affected by a general decline in market segments related to the index. Gold, precious metals, and precious minerals funds may be susceptible to adverse economic, political or regulatory developments due to concentrating in a single theme. The prices of gold, precious metals, and precious minerals are subject to substantial price fluctuations over short periods of time and may be affected by unpredictable international monetary and political policies. We suggest investing no more than 5% to 10% of your portfolio in these sectors.

It is not possible to invest in an index.

Market Capitalization is the value of the fund as determined by the market price of its issued and outstanding stock. The Weighted Average Market Capitalization of a portfolio equals the average of each holding's market cap, weighted by its relative position size in the portfolio (in such a weighting scheme, larger positions have a greater influence on the calculation). Price-Earnings Ratio (P/E Ratio) is determined by dividing the price of the stock by the company's forecasted earnings per share. Fund holdings and allocations are subject to change at any time and should not be considered a recommendation to buy or sell any security.
